

## Boggle Solver Code Review

Engineer: Stephanie Percy

Reviewer: Doron Reid

### **Code Clarity**

- Code is clear and easy to follow along with within each line.

### **Variable names**

- The variable names are relevant, precise, and relate according to what the value it holds.

### **Indentation**

- Indentation should be applied more within the findAllSolutions function. Indent everything within that function, and the code within each loop and conditional statement.

### **Do you feel you can modify the code easily?**

- Each helper function is clear in what the functionality does. The loops in the code are written well and make sense.

### **What is your opinion about the style used?**

- This code was written well, I would just recommend doing indentation edits. It's not difficult to read and runs very efficiently. Amazing job with utilizing helper functions.
- The comments are also very helpful in keeping track of the steps to solve the boggle, it adds to the structure.

### **Suggestions**

- Indentation within functions to help with readability.
- Include comments throughout the helper functions on the responsibility that it has in the code, just to maintain consistency and to help others understand it more clearly.
- Clean up the empty spaces in order to help with organization, only leaving space between the different functions, conditions, and loops.
